

Modernize Legacy Application Delivery Without Rewriting a Single Line of Code

The Problem

Legacy Windows and desktop applications still power critical business processes but delivering them securely to today's distributed workforce is a growing burden. VPNs are slow. VDI is complex. And rewriting apps isn't viable. IT teams are stuck maintaining outdated delivery models, managing aging infrastructure, and trying to secure environments never built for remote work.

The Solution

Sonet.io modernizes how legacy apps are delivered without touching the code. Give users secure, instant delivery of Windows desktop apps, terminal systems, and thick-client tools through any browser. No VPN. No device shipping. No endpoint agents.

With Sonet.io, enterprises extend the life of their legacy apps, eliminate delivery complexity, and enforce enterprise-grade security all from a cloud-native platform built for scale.

Key Benefits

No Rewrites or Rebuilds

Run legacy applications exactly as they are without code changes, containers, or rebuilds.

Delivered via Browser, Anywhere

Deliver Windows, terminal, and thick-client apps to any user, on any device, through a secure browser experience without installs or VPNs.

Built-In Zero Trust Security

Enforce session control, Data Loss Prevention (DLP), and role-based access from the browser—no trusted endpoints required. Designed to align with modern security priorities and zero trust mandates.

Fast Onboarding, Lower Cost

Provision users and deliver apps in minutes. Eliminate hardware, shipping, and IT support tickets.

Key Capabilities

• Deliver Legacy Apps via Browser

Provide Windows, terminal, and thick-client applications through a secure, browser-delivered experience.

• Support for On-Prem and Cloud-Hosted Apps

Securely deliver apps from wherever they reside, data center or cloud, without code changes.

• Session Monitoring and Recording

Gain full visibility with detailed logs, real-time alerts, and session playback.

• Granular Security Controls

Apply clipboard controls, watermarking, and DLP policies based on user identity and group.

• Simple Integration with SSO

Use your existing identity provider to assign access and security policies by role or team.

• No Client or Agent Installations

Eliminate endpoint dependencies. Applications are delivered securely via browser with nothing to install.

Why Sonet.io

Legacy apps are critical but their delivery doesn't have to be complex. Sonet.io helps IT teams modernize how legacy software is delivered, without rewriting code or maintaining infrastructure. Applications are securely delivered via browser, giving users what they need without the operational burden.

“Just because it's working doesn't mean it's the best solution.”

— IT Director, National Equipment Services Firm

Implementation

Get started fast. Deploy Sonet.io in under an hour, connect to your on-prem systems via lightweight connectors, and provision users instantly with SSO integration.
